NEW HIGH REACTIVITY DIAMINO FUNCTIONAL PRODUCTS

Chartwell International, Inc. is pleased to announce the availability of two new diamino functional adhesion promoters, **B-516.71HRW** (zero VOC) and **C-516.72HR** (propylene glycol solution).

The products offer enhanced amine reactivity for use in PUD, WB acrylic, 2K epoxy and 2K PU. Materials are easily incorporated and effective at 0.35 – 1.4 wt per cent as supplied based on polymer solids. Enhanced wet adhesion (and improved corrosion resistance) is observed on all metals, concrete, wood, ceramics, glass and many plastics.

Products are indefinitely stable in all WB and SB coatings/ adhesives. Materials are cost effective, adding less than 3 cents per pound RMC to coatings and adhesives.

Samples and technical data are available upon request.
